

Oil Field Environmental Incident Summary

Incident: 20150930164541 **Date/Time of Notice:** 09/30/2015 16:45

Responsible Party: HESS BAKKEN INVESTMENTS II, LLC

Well Operator: HESS BAKKEN INVESTMENTS II, LLC

Well Name: FRYBURG HEATH-MADISON UNIT F-812

Field Name: FRYBURG

Well File #: 1508

Date Incident: 9/30/2015

Time Incident: 08:00

Facility ID Number:

County: BILLINGS

Twp: 139

Rng: 101

Sec: 10

Qtr:

Location Description:

Submitted By: Alex Beach

Received By:

Contact Person: Jason Henry
3015 16th Street SW, Suite 20
Minot, ND 58701

General Land Use: Pasture

Affected Medium: Soil and Water

Distance Nearest Occupied Building: 2 Mile

Distance Nearest Water Well: 2 Mile

Type of Incident: Valve/Piping Connection Leak

Release Contained in Dike: No

Reported to NRC: No

	Spilled	Units	Recovered	Units	Followup	Units
Oil						
Brine	70	Barrels	68	Barrels	68	barrels
Other						

Description of Other Released Contaminant:

Inspected:

Written Report Received: 2/19/2016

Clean Up Concluded: 10/19/2015

Risk Evaluation:

There is no immediate risk to report at this time.

Areal Extent:

The fluid travelled in a long narrow path following natural drainage.

Potential Environmental Impacts:

There are potential environmental impacts to the areas that the produced water touched as it travelled off site.

Action Taken or Planned:

A vacuum truck recovered approximately 78 bbl of fluid of which approximately 10 bbl was storm water. The ND Hess Environmental Supervisor contacted (09-30-2015 -16:00) Carmen Waldo with the US Forest Service. An environmental remediation contractor was notified to start the remediation process.

Wastes Disposal Location: All recovered wastes will be disposed of at an approved waste disposal facility.

Agencies Involved: US Forest Service - Carmen Waldo

Notes:

Release impacted areas off location. Follow-up is required.

Date: 10/29/2015 **Status:** Inspection

Author: Washek, Sandi

Updated Oil Volume:

Updated Salt Water Volume: 70.00 barrels

Updated Other Volume:

Updated Other Contaminant

Notes:

Arrived on site at 6:19 p.m. CT. Weather was sunny with light winds out of NE, and temperature was 43 degrees F.

The well is located in badlands terrain used for pastureland. The spill did not reach water, but there is a dry seasonal drainage and culvert that runs under the road about 125 feet east of the well pad.

At the time of the inspection, the site was being remediated. Contaminated soil was piled on top of plastic sheeting, and a number of holes were in place surrounded by orange fencing. Construction equipment was on site. There was a small amount of liquid in a puddle near the plastic. Chloride testing showed the water at 784 ppm for chlorides. All soil and water are contained on site. Additional followup needed.

Updated Other Contaminant

Notes:

Was copied in four emails directed to Carmen Waldo of the U.S. Forest Service (USFS) with a Site Assessment Work Plan (2/18/16), Supplemental Site Assessment Work Plan (3/16/16), Site Assessment Work Plan Addendum (3/15/16) and a Site Assessment Work Plan Addendum (3/30/16). According to field inspector Sandi Washek, the spill did not reach water and was being remediated during her inspection on 10/29/15. The spill inspection team will contact the USFS to determine if cleanup has been completed. Reports have been added to the incident folder. More follow-up needed.
